

Title: Error message is not shown in a distinctive manner, when incorrect input is provided

Severity: Medium

Summary:

When the user provides wrong date or hour format, the error message is shown in the table and is not clearly visible and distinctive.

Prerequisites:(Optional)

Steps to reproduce:

1. Navigate to: <http://www.shino.de/parkcalc/index.php>
2. Write in entry date 6/22/2018
3. Write in leaving date 6/22/2017

...

Actual condition: Error message is shown as a row from the table.

Expected condition: The error should be displayed in a distinct manner so the user is aware that there is a mistake in the form.

Why is it a bug? This is inconsistent with oracles:

- User expectations - as a user I expect to be notified when I am making a mistake
- Purpose - the purpose of error message is to stand out and inform me of a problem
- Concurrent products - other forms inform user of mistake in a much more clear manner.

If the user is not aware what the problem is or if there is a problem at all, that might lead to confusion and mistakes.

Environment: Home PC

OS:Microsoft Windows [Version 10.0.17134.112]

Browser v. Google Chrome Version 67.0.3396.87
