Title: User can user html tags in door names
Title: Door name field validation allows html tags to be entered
Severity:3
Priority:2
Version: Production 2.36

Description:
Summary: Validation of the name field is broken and allows any type of characters to be entered.

Expected Result: HTML tags are forbidden or properly escaped
Actual Result: HTML tags are rendered as part of the page html code

Steps reproduce:
1. Login in the system
2. Navigate to Doors page
3. Add new door with name: "<b> My Test Name" and click Save
4. Navigate back to Door page and view the newly added door

Title: Cant search for users using non-latin characters
Title: Search for user with non-latin characters is leading to unexpected error message
Severity: 3
Priority: 2
Environment: All browsers

Summary: Non-latin letters are causing issues with ajax calls made during search

Expected Result: User should be able to search using unicode characters
Actual Result: Non-latin letters/chars are causing unexpected error message to be displayed

Steps to reproduce:
1. Login in the system
2. Navigate to Users page
3. Add new user with first name: "?????" and last name: "??????????" and save it
4. Search for newly added user by full match: "?????"
